Banner Temperature & Humidity
Sensor Calibration Statement

M12FTH3Q

Calibration Traceability

Banner M12FTH3Q Modbus temperature and humidity sensors are carefully manufactured in compliance with Banner Engineering's ISO 9001:2015 certification. Each sensor is made with calibrated components and verified for accuracy before shipment.

Certificates of calibration are not provided with purchased sensors. The calibrated component for temperature and humidity sensing is calibrated at the point of manufacture. All transfer standards used in calibration of the component are tracible to an ISO17025 and SCS (Swiss Accreditation Services) accredited laboratory for absolute humidity, relative humidity, and temperature.

If a customer requires a calibration certificate it is recommended to utilize a third-party calibration service with the acceptable limits from the datasheet.
