

## **AOI v2 or v4, Which Files to use?**

**7/15/2022**

AOI versions 2 and 4 are very similar to each other. The only difference between the two is that version 4 has larger arrays. The version 2 arrays have a size of 70 SINTs while the version 4 has arrays of size 190 SINTs. This change was required to allow for larger IO-Link Parameter data indexes to be viable. Before the largest index could have a size of 65 SINTs. If the larger size is not needed then the v2 files can continue to be used. While it is possible to use both versions double the memory allocation will be required.

If currently using v2 AOIs and the larger size is not necessary, continue using the v2 versions.
